# **City Council Election District Boundaries Three Draft Plans – Six Council Districts**

**City of Santa Clara** 

Jeanne Gobalet, Ph.D.

Lapkoff & Gobalet Demographic Research, Inc.

www.Demographers.com

July 3, 2018, Public Hearing

#### **Agenda**

- \* Districting criteria used by demographers
- Relevant demographic data for the City as a whole
- \* Computer mapping data ("layers") used when drawing election districts
- \* Background maps
- \* Three draft plans for 6 Council districts
- \* Questions?

#### **Districting Criteria used by Demographers**

- Population Equality Census 2010 data
- Federal Voting Rights Act
- State Elections Code
- Other criteria

#### Required Districting Criteria: Population Equality

- Census 2010 population data must be used in districting (until 2020 Census data are available)
- New election districts must be nearly equal in total population:
  - No more than 10% total deviation using 2010 population
  - Santa Clara's Census 2010 population was 116,468. Each of six City Council districts must contain approximately one-sixth of this total (about 19,411 residents).
    - Population difference between most- and least-populous districts should not exceed 1,941. This is called "total deviation".
    - The City's post-2010 housing and population growth has been geographically uneven. We can take the added estimated population into account to a very limited extent by giving the Council districts with the most growth smaller total populations (deviation must not exceed 10%, however).

# Required Districting Criteria: Federal Voting Rights Act

- Election districts should provide members of protected groups the opportunity to elect representatives of their choice (or possibly to influence the election of representatives of their choice)
  - Supreme Court decisions (Shaw v. Reno and others) say race cannot be the "predominant" factor in redistricting, unless there is a "compelling state interest."
  - Supreme Court decision (Evenwel et al. v. Abbott, Governor of Texas, et al., 2016) affirmed that total population is to be used to balance election districts.

## Traditional Districting Criteria California Elections Code

#### District lines may be drawn that consider:

- Topography (e.g., rivers, natural barriers)
- Geography (e.g., municipal boundaries)
- Cohesiveness, contiguity, integrity, & compactness of territory
- "Communities of interest," which may be:
  - Geographic communities (e.g., neighborhoods)
  - Socioeconomic groups (e.g., Federal Voting Rights Act protected groups, etc.)

In addition, when drawing election districts, we try to use major roads and other identifiable features as boundaries.

#### **Further Criteria Emphasized by Courts**

- Respect boundaries of existing political subdivisions, when possible (e.g. voting precincts, etc.)
- Respect existing census geography (e.g., city blocks)
- Avoid head-to-head contests between incumbents
- Other criteria which may address unique local concerns

# Computer Mapping (GIS) Data ("layers") used by Demographers

- U.S. Census 2010 blocks (building blocks for election districts—Census Bureau population data are for these geographical units)
- Santa Clara County precincts (used by Registrar of Voters to implement districting plan)
- GIS layers from the City's GIS
  - Streets, parcels...
- GIS layers from the U.S. Census Bureau
  - railroads, water features, landmarks...
- Santa Clara Unified School District attendance area boundaries
- Nextdoor neighborhood map

## Demographic measures used in districting (City of Santa Clara totals)

					Y 1	1 70			
	Census 2010					NH Native	NH Hawaiian		
	total			Hispanic		American AK	Pacific	NH Other	NH Other
	population	NH Asian	NH White	origin	NH Black	native	Islander	race	mixed race

	est total	NH Asian	NH White	Hispanic	all Other				
	CVAP 2012-16	CVAP	CVAP	origin CVAP	CVAP				
American Community									
Survey 2012-16									
estimated Citizen	66,036	19,252	33,644	11,086	2,054				
Voting Age Population									
(CVAP)									
Percent		29%	51%	17%	3%				

We combine Census blocks (the smallest unit of Census geography) and aggregate block numbers for Pieces (subareas of the City). We use Pieces to develop draft districting plans.

Census 2010
distribution of the
City's population by
race/ethnicity (by
Census block)

Data from the U.S. Census 2010 Redistricting Data Release (PL94-171)

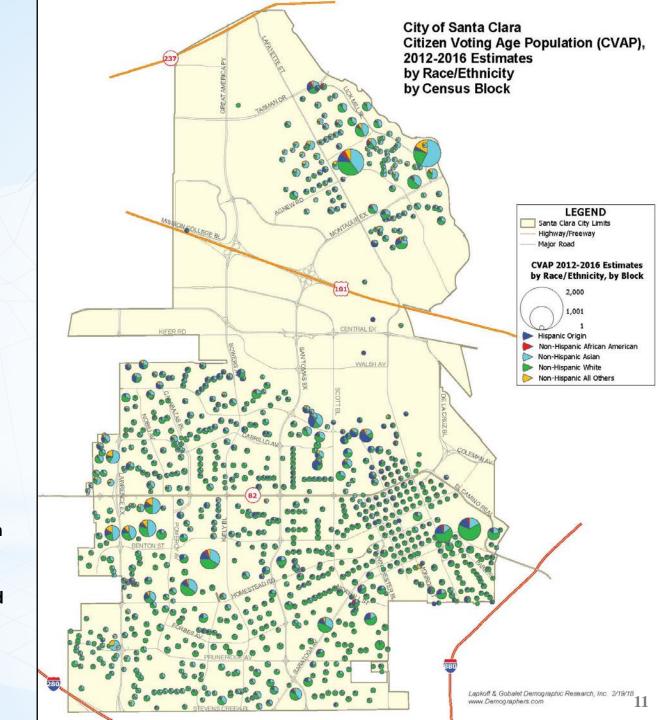

Race/ethnic identity is chosen by Census survey respondents

Estimated CVAP
(Citizen Voting Age
Population) by
Census Block

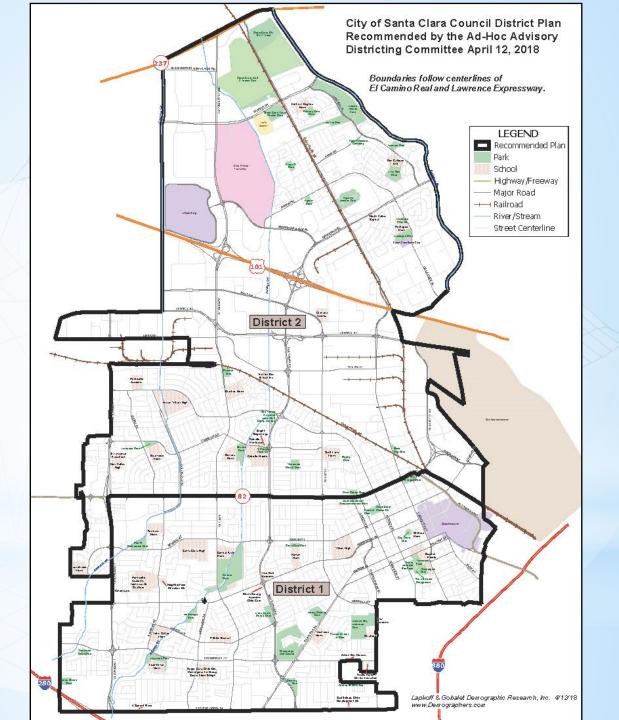

CVAP estimates for Census blocks are from a special tabulation of American Community Survey 2012-16 data by the U.S. Census Bureau. These estimates are from small samples and are inexact.

http://statewidedatabase.org/

### Background: 2-District Plan

Rejected by voters (Measure A)

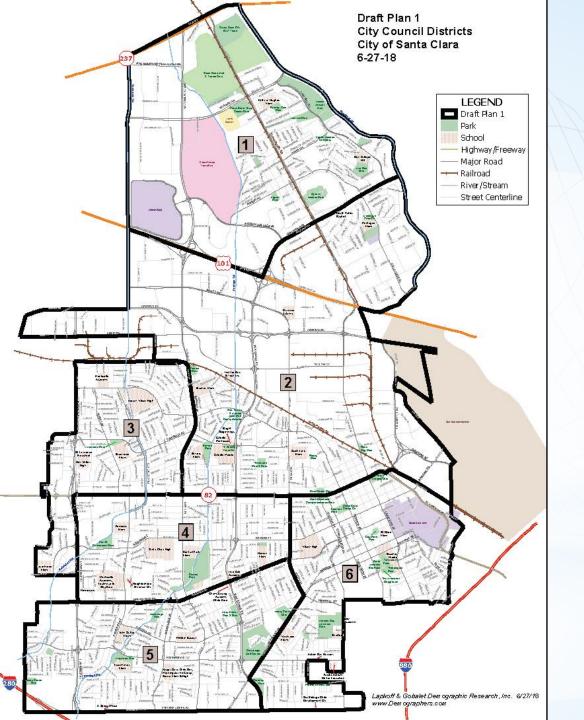

### **Draft Plans**

#### **Draft Plans 1, 2, 3:**

- Each has 6 Council districts with (relatively) equal
   2010 total populations
- All three plans use the May 8, 2018, 2-district plan boundary (mostly following El Camino Real)
- Plans built from Census blocks aggregated to construct Pieces
- Boundaries are major thoroughfares, when possible

In all three plans, Districts 3 and 4 have the smallest populations to take into account estimated post-2017 population growth from new housing.

## **Draft Plan 1**6 Council Districts

Note boundary between D1 and D2 (in the north) – Draft Plan 2 shows a different possibility

#### **Draft Plan 1 data**

#### Plan deviation = 7.5%

				$\overline{}$

Deviation when taking into account the estimated post-2010 population growth from new housing = 12.0%

#### **Pieces are Building blocks for Council Districts**

- Members of the public who wish to design Council Districts may use the Excel file posted on the City's website ("Calculator for 6-District plans with Pieces map 070318.xlsx"). It is based on Pieces data (for 36 subareas of the City). The Pieces can be modified upon request. The Excel file provides automatic calculations of a draft plan's deviation and CVAP characteristics.
  - The "Pieces" were drawn while taking into account:
    - Major thoroughfares
    - Neighborhoods
    - Communities of interest
    - Election precinct boundaries
    - Santa Clara Unified School District's elementary attendance areas
  - More about "Pieces"
    - They do not have equal populations: they are intended to be useful for building Council districts
    - Boundaries can be adjusted--subdivided or revised--if it seems useful to do so
- An Excel file containing Census block-level data will be posted on the City's website. There
  were nearly 1,900 Census blocks in the City in 2010, too many for most people to use to
  build plans. This database could be used by those with GIS capability.

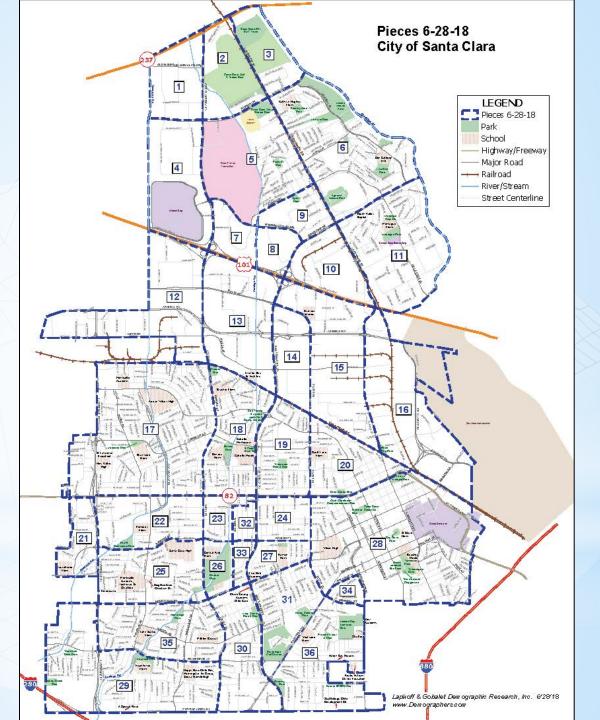

See background information, maps, data, and Draft Plans on the City's website.

City of Santa Clara subareas / "pieces" can be combined to create Council district scenarios – June 28 version

These subareas were created by the city's demographer.

They can be modified (subdivided or revised) if it seems useful to do so.

An Excel file for use in connection with this map will be posted on the City's website.
